

Fixed assembly

The span wire system Display-It offers the possibility to easily create and change a presentation freely in the room (for example in shop windows) as well as onto the walls. The assembly feet can be fastened to the wall as well as to the ceiling and are therefore also an ideal solution for slanting walls. An extra suspension of the wires is not necessary as the assembly feet are provided with a self-gripping mechanism.

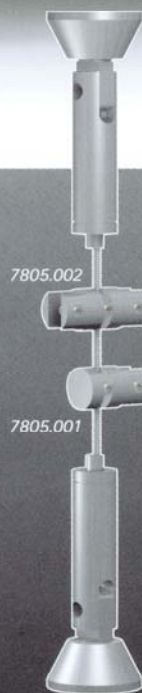

The wire can easily be conducted through the assembly feet and subsequently be "tightened". The surplus wire can be cut off. By means of the clamps the acrylic displays can be hung and a choice can be made between a single or double presentation.

Description

Set steel wire 400cms fixed assembly
 Clamp single
 Clamp double
 Hexagon key Ø2mms (for clamp)
